

# 100% Online Masters of Public Health | Utah State University

The MPH program is offered 100% online which means you can take courses from anywhere in the world. You are not required to be on campus or attend classes virtually at any time. With that said, there are plenty of opportunities to connect with faculty and students via Zoom.

The Master of Public Health (MPH) concentrations of Public Health Nutrition and Veterinary Public Health offered through the College of Agriculture and Natural Resources (QANR) are very unique to the region. These programs offer a specific combination of education and applied practice that are tailored to students interested in nutrition and veterinary public health. QANR MPH students have primarily been practicing dietitians, veterinarians, and other public health professionals who are pursuing continued education to advance their career opportunities. The degrees have increased acceptance rates for students applying to professional schools such as veterinary or medical school. QANR MPH concentrations are available completely online to accommodate students who have other professional and personal responsibilities. Select courses can be taken face-to-face for students who live in the area and prefer the traditional classroom experience.
