

3D Printing Made its Way to USU Eastern

Madison Leak

01/27/2021

Utah State University Eastern broke new ground this past fall with the launch of the additive manufacturing certification course. More commonly known as 3-D printing, additive manufacturing is the first program of its kind to call USUE home. The additive course is a one-semester, 12 credit hour program that will teach students about the ins and outs of 3D printing. This certification will serve as a springboard into the world of manufacturing, as students can choose to further their education by completing an associate's or a bachelor's degree in a related field.
